WORK EXPERIENCE

Engineering Lead - Quality Persistent Systems Ltd.

03/2014 - Present

Pune

Achievements/Tasks

- Requirement Understanding: Participate in discussions with client to understand requirements from a technical and functional standpoint. Review and guide the Quality Engineers in understanding of technology/domain.
- Delivery & Quality Focus: Update relevant test documentation correctly and in time. Proactively communicate test-blocking issues to supervisor as they are discovered, ensure 100% test case, test script and defect reviews
- Test Planning: Provide estimates to supervisor based on understanding of module and own expertise. Provide inputs to the supervisor in creating testing plan.
- Test Case Design: Share test cases with supervisor for review. Develop integration test cases as required. Review user cases/ requirements for testability and improve test assets if required
- Test Execution: Execute automation test scripts/manual test cases as per test plan. Share findings with supervisor. Review and analyze test results. Identify defects/deviations from expected result
- Bug Reporting: Run test cases to check for defects. Understand bugs and assign priority/severity to bugs raised. Share priority report with supervisor for review. Report defects / bugs identified to development team and track progress on bugs reported.
- Technical Guidance: Guide team members in problem solving process. While one is not expected to do people management one should still continue to provide technical guidance to the team.
- Stakeholder Management: Get periodic feedback from relevant stakeholders, draw improvement action plans and track them to closure.
