

## Task

Create a online payment portal using Moneris payment gateway. Client wants to accept payments online.

Fixed CAD\$100 or custom amount (between 100-10000)

## Insight

The old website had an operational page with this feature here

<https://drsavitachaudhry.ca/staging/online-virtual-dentist/#pay-here>

But its not working now.

This old payment module was made using a custom plugin using moneris API. ("TP Moneris" already installed at <http://xperrymeantz.com/dsc-new/> )

## Present Requirement

We want the same design and payment form working on new location.

<http://xperrymeantz.com/dsc-new/pay-online/>

will be moved to staging, then live.

We need to verify cvv also.

## Options

1. Using the same custom plugin we used earlier. (This plugin also stored transaction details and displayed in WP backend and also had its own mailer templates for notifications)
2. Using a woocommerce Moneris plugin (**WooCommerce Moneris Gateway, installed**). This way we can use the plugin to manage Moneris and also keep record of payments in woocommerce.
3. Do whatever best you can do, the core requirements are;
  - a. We need to get paid and using Moneris
  - b. We need to keep track of payments and data (not card data though)
  - c. We need to send out notification emails to admin and user.
  - d. And all this needs to work flawlessly.

## **Moneris details**

Please create a demo developer account and work using sandbox. When working we will replace with production key and store ID.
